Here, we will tell you the working of Freeze and un-freeze working of the system. Download Freezing and Un-freezing in Windows 10/8/7/XP/Vista/MBR This article can help you to solve many problems and can make your work easier. I have written this article as the blog owner and the author may be interested. If you like this article, please share it with others. To activate or to enable Windows to freeze, you need to download and install this utility. This tool is extremely useful when the user has been victim of viruses or other malware that have been altered to ensure that the changes made to the file are not

stored. But it does not prevent you from making changes to the operating system. You may be thinking that Windows should be able to prevent you from altering the system configuration. But that is not the case. In Windows, you can make changes to any system setting, but when you restart the computer, it may cause unwanted side effects. We have explained the working of Freeze in Windows 10 in the following lines. Here, you will learn how to make changes to the operating system on behalf of yourself, to prevent Windows from making changes to your settings. After all, you have not performed any malicious task on the computer. Freezing and Un-freezing the operating system in Windows 10
